

Talaria Mobile Content Delivery System

Higher Education Overview

Confidential – February 7, 2013

The Talaria Mobile Delivery System

Communication - Content and Consumption

Every University has a fundamental need to communicate with their various audiences - students, alumni, faculty, sports fans, parents and more. Countless hours and effort have been spent to create great content for those audiences and now Talaria makes it easy to consume that content on the audiences' device of choice - mobile. Talaria is a mobile content delivery system that delivers your news, your photos, your events, your videos, your sports information and more in a delightful user experience that encourages your audiences to consume your content.

No longer confined to a web portal or easily ignored emails, your leadership now has a direct, unfettered communication channel that is actually listened to. Your alumni now has a curated source of information and news to help them to understand their alma mater. Your students now have insights to everything that is happening at the university literally at their fingertips.

Talaria is about communication of content gathered across diverse sources, both inside and outside of a University. Think of it as your engagement engine, one that can be used pull along your audiences to more specific functionality such as schedules, grades, and donations through links to other applications or mobile websites.

Talaria Higher Education Advantages

Talaria is composed of a robust, state-of-the-art mobile content engine and award winning mobile native applications. Combining both the science of mobile data management and the art of mobile user experience, Talaria apps are designed to communicate with internal and external audiences in ways that engender high levels of engagement. Advantages include:

Delightful User Experience

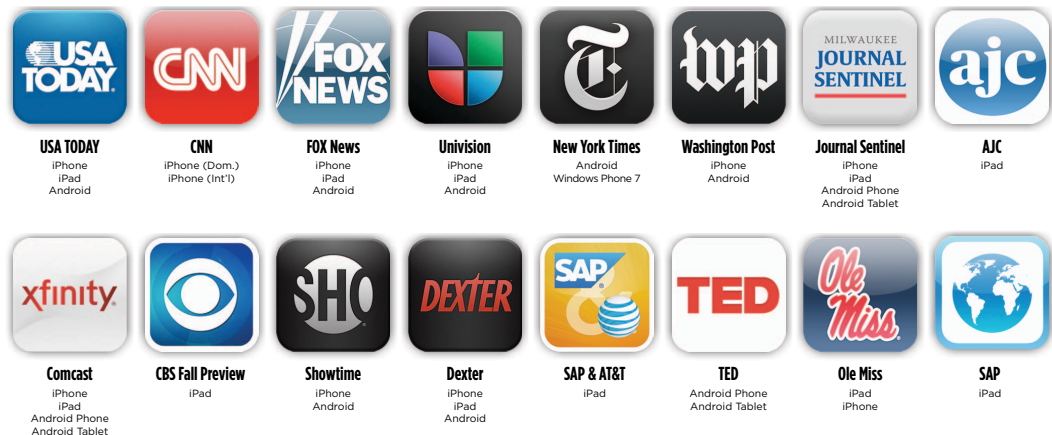

Talaria provides a superior user experience that leads to users more frequent and extended engagement with app content. Our apps are better designed, faster to load, faster to navigate, cache data for offline use, are more responsive, and provide better navigation than PC or mobile web sites.

Rapid Deployment

The Talaria user experience and data feeds are customized for each organization and audience using Mercury's proprietary rapid development process. You can be engaging your audiences with highly professional mobile apps in as little as 60 days with content limited only by your imagination and existing sources.

About Mercury

Mercury, in business for over 15 years, has more experience in the mobile news & information business than any other company. Mercury built the following major news & information applications, most of which are powered by Mercury's M³ content delivery engine.

Mercury apps are highly ranked by the people who matter: users. Many have achieved #1 in their category and almost all have 4+ star ratings. Mentioned in many books and magazine articles, one Mercury app even won the vaunted television Emmy.

The company is regularly recommended both by Apple and Google.
